EPHA2 (Phospho-Thr593) Antibody

Catalog No: #12885

Package Size: #12885-1 50ul #12885-2 100ul

Orders: order@abscitech.com Support: tech@abscitech.com

		4.0	
Desc	rir	ጎተ፣	٦r
レしるい	ᆈᄟ	JUN	JI.

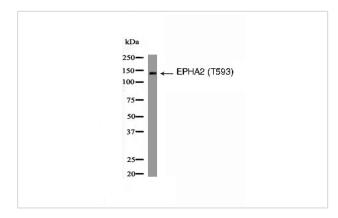

Calculated MW	125
Accession No.	Swiss-Prot#:P29317 NCBI Gene ID1969
	Tyrosine-protein kinase receptor SEK-2 antibody
	Tyrosine-protein kinase receptor MPK-5 antibody
	Tyrosine-protein kinase receptor ECK antibody
	Tyrosine protein kinase receptor ECK antibody
	Soluble EPHA2 variant 1 antibody
	Sek2 antibody
	Sek 2 antibody
	Myk2 antibody
	Myk 2 antibody
	Epithelial cell receptor protein tyrosine kinase antibody
	Epithelial cell kinase antibody
	Ephrin type-A receptor 2 antibody
	Ephrin type A receptor 2 antibody
	Ephrin receptor EnhA2 antibody
	Ephrin receptor antibody
	EPHA2_HUMAN antibody
	EPHA2 antibody
	Eph receptor A2 antibody
	Eck antibody
	CTRCT6 antibody EC 2.7.10.1 antibody
	CTPA antibody CTPP1 antibody
	AW545284 antibody
Other Names	ARCC2 antibody
Immunogen Description	A synthesized peptide derived from human EPHA2 (Phospho-Thr593)
Immunogen Type	Peptide-KLH
Specificity	EPHA2 (Phospho-T593) Antibody detects endogenous levels of EPHA2 only when phosphorylated at T593
Species Reactivity	Hu Rt
Applications	WB
Clonality	Polyclonal
Host Species	Rabbit
Brief Description	Rabbit Polyclonal
Product Name	EPHA2 (Phospho-Thr593) Antibody

Formulation	Rabbit IgG in phosphate buffered saline (without Mg2+ and Ca2+) pH 7.4 150mM NaCl 0.02% sodium azide	
	and 50% glycerol.	
Storage	Store at -20°C	

Application Details

WB dilution:1:1000

Images

Western blot analysis EPHA2 (Phospho-Thr593) using Jurkat whole cell lysates

Product Description

The Eph receptors are the largest known family of receptor tyrosine kinases (RTKs). They can be divided into two groups based on sequence similarity and on their preference for a subset of ligands: EphA receptors bind to a glycosylphosphatidylinositol-anchored ephrin A ligand; EphB receptors bind to ephrin B proteins that have a transmembrane and cytoplasmic domain (1,2). Research studies have shown that Eph receptors and ligands may be involved in many diseases including cancer (3). Both ephrin A and B ligands have dual functions. As RTK ligands, ephrins stimulate the kinase activity of Eph receptors and activate signaling pathways in receptor-expressing cells. The ephrin extracellular domain is sufficient for this function as long as it is clustered (4). The second function of ephrins has been described as "reverse signaling", whereby the cytoplasmic domain becomes tyrosine phosphorylated, allowing interactions with other proteins that may activate signaling pathways in the ligand-expressing cells (5). Various stimuli can induce tyrosine phosphorylation of ephrin B, including binding to EphB receptors, activation of Src kinase, and stimulation by PDGF and FGF (6). Tyr324 and Tyr327 have been identified as major phosphorylation sites of ephrin B1 in vivo (7).

Note: This product is for in vitro research use only and is not intended for use in humans or animals.
